

# JAVA SCRIPT BUILD-IN METHODS

#### **IMPORTANT CHEATSHEET**

+91-7260058093

www.algotutor.io

## 1. Array Methods

```
forEach(): array.forEach(element => console.log(element));
map(): const squares = array.map(x => x * x);

    filter(): const evens = array.filter(x => x % 2 === 0);

reduce(): const sum = array.reduce((acc, curr) => acc +
  curr, 0);
• find(): const found = array.find(x => x > 10);
indexOf(): const index = array.indexOf(item);
push(): array.push(item);
pop(): const lastItem = array.pop();
shift(): const firstItem = array.shift();
unshift(): array.unshift(item);
• splice(): array.splice(startIndex, deleteCount, item);

    slice(): const sliced = array.slice(startIndex, endIndex);

concat(): const mergedArray = array1.concat(array2);
join(): const str = array.join(',');
includes(): const hasItem = array.includes(item);
• some(): const hasNegative = array.some(x => x < 0);

    every(): const allPositive = array.every(x => x > 0);

    sort(): array.sort((a, b) => a - b);

reverse(): array.reverse();
```

## 2. String Methods

```
charAt(): const char = str.charAt(index);
concat(): const combinedStr = strl.concat(str2);
includes(): const hasSubstring = str.includes(substring);
indexOf(): const index = str.indexOf(substring);

    lastIndexOf(): const lastIndex = str.lastIndexOf(substring);

match(): const matches = str.match(regex);
repeat(): const repeatedStr = str.repeat(times);
replace(): const replacedStr = str.replace(regex,
 newSubstr);
search(): const index = str.search(regex);

    slice(): const slicedStr = str.slice(startIndex, endIndex);

split(): const tokens = str.split(delimiter);
• substring(): const substring = str.substring(startIndex,
 endIndex);

    toLowerCase(): const lowerStr = str.toLowerCase();

toUpperCase(): const upperStr = str.toUpperCase();
trim(): const trimmedStr = str.trim();
```

## 3. Object Methods

- Object.keys(): const keys = Object.keys(obj);
   Object.values(): const values = Object.values(obj);
   Object.entries(): const entries = Object.entries(obj);
   Object.assign(): const newObj = Object.assign({}, objl, obj2); Object.freeze(): const frozenObj = Object.freeze(obj);
   Object.isFrozen(): const isFrozen = Object.isFrozen(obj);
   Object.seal(): const sealedObj = Object.seal(obj);
   Object.isSealed(): const isSealed = Object.isSealed(obj);
   Object.create(): const newObj = Object.create(): const newObj = Object.create(): const newObj;
- Object.hasOwnProperty(): const hasProp = obj.hasOwnProperty(prop);

#### 4. Number Methods

- Number.parseInt(): const intVal = Number.parseInt(string, radix);
- Number.parseFloat(): const floatVal = Number.parseFloat(string);
- Number.isNaN(): const isNaN = Number.isNaN(value);
- Number.isFinite(): const isFinite = Number.isFinite(value);
- Number.isInteger(): const isInteger = Number.isInteger(value);
- Number.toFixed(): const fixedStr = num.toFixed(digits);

## 5. Math Functions

- Math.abs(): const absolute = Math.abs(num);
- Math.ceil(): const roundedUp = Math.ceil(num);
- Math.floor(): const roundedDown = Math.floor(num);
- Math.round(): const rounded = Math.round(num);
- Math.max(): const max = Math.max(num1, num2, ...);
- Math.min(): const min = Math.min(num1, num2, ...);
- Math.pow(): const power = Math.pow(base, exponent);
- Math.sqrt(): const sqrt = Math.sqrt(num);
- Math.random(): const randomNum = Math.random();

## 6. Global Functions

parseInt(): const intVal = parseInt(string, radix);
parseFloat(): const floatVal = parseFloat(string);
isNaN(): const isNaN = isNaN(value);
isFinite(): const isFinite = isFinite(value);

## 7. Date Methods

Date.now(): const now = Date.now();
Date.parse(): const timestamp =
 Date.parse(dateString);
new Date(): const date = new Date(year, month, day, ...);

## 8. Regular Expression Methods

- RegExp.test(): const matchesPattern = regex.test(string);
- RegExp.exec(): const match = regex.exec(string);

## 9. JSON Methods

- JSON.stringify(): const jsonString = JSON.stringify(obj);
- JSON.parse(): const obj = JSON.parse(jsonString);

#### 10. Web APIs

- setTimeout(): const timeoutId = setTimeout(() => { /\* code \*/ }, delay);
- clearTimeout(): clearTimeout(timeoutId);
- setInterval(): const intervalId = setInterval(() => { /\* code \*/ }, delay);
- clearInterval(): clearInterval(intervalId);

## 11. Promises and Asynchronous Programming

```
Promise.then(): promise.then(value => { /* code */ });
Promise.catch(): promise.catch(error => { /* code */ });
Promise.finally(): promise.finally(() => { /* code */ });
Promise.all(): Promise.all([promisel, promise2]).then(values => { /* code */ });
Promise.race(): Promise.race([promisel, promise2]).then(value => { /* code */ });
async function: async function fetchData() { const data = await fetch(url); }
```

#### 12. Console Methods

console.log(): console.log('message', obj);
console.warn(): console.warn('warning message');
console.error(): console.error('error message');
console.info(): console.info('info message');
console.clear(): console.clear();

#### 13. Miscellaneous Methods

- alert(): alert('Alert message');
- confirm(): const confirmed = confirm('Are you sure?');
- prompt(): const userInput = prompt('Enter your name:', 'Default Name');
- encodeURIComponent(): const encoded = encodeURIComponent(uriComponent);
- decodeURIComponent(): const decoded = decodeURIComponent(encodedUriComponent);

## 14. DOM Manipulation (Web-Specific)

- document.getElementById(): const element = document.getElementById('id');
- document.querySelector(): const element = document.querySelector('.class');
- document.querySelectorAll(): const elements = document.querySelectorAll('div');
- document.createElement(): const div = document.createElement('div');

- element.appendChild(): parentElement.appendChild(childElement);
- element.innerHTML: element.innerHTML = 'New content';
- element.addEventListener():
   element.addEventListener('click', eventHandler);
- element.style: element.style.color = 'blue';
- element.setAttribute(): element.setAttribute('data-custom', 'value');
- element.removeAttribute():
   element.removeAttribute('data-custom');

## 15. Event Handling

- element.onclick: element.onclick = function() { /\* code \*/};
- element.addEventListener():
   element.addEventListener('click', eventHandler);
- element.removeEventListener():
   element.removeEventListener('click', eventHandler);
- event.preventDefault(): element.addEventListener('click', event => event.preventDefault());
